

# DIABETIC FOOT CARE GUIDELINES

American College of  
Foot and Ankle Surgeons

**D**iabetes can be dangerous to your feet—even a small cut could have serious consequences. Diabetes may cause nerve damage that takes away the feeling in your feet. Diabetes may also reduce blood flow to the feet, making it harder to heal an injury or resist infection. Because of these problems, you might not notice a pebble in your shoe—so you could develop a blister, then a sore, then a stubborn infection that might cause amputation of your foot or leg.

To avoid serious foot problems that could result in losing a toe, foot, or leg, be sure to follow these guidelines.

- Inspect your feet daily.** Check for cuts, blisters, redness, swelling, or nail problems. Use a magnifying hand mirror to look at the bottom of your feet. Call your doctor if you notice anything.
- Wash your feet in lukewarm (not hot!) water.** Keep your feet clean by washing them daily. But only use *lukewarm* water—the temperature you'd use on a newborn baby.
- Be gentle when bathing your feet.** Wash them using a soft washcloth or sponge. Dry by blotting or patting—and make sure to carefully dry between the toes.
- Moisturize your feet—but not between your toes.** Use a moisturizer daily to keep dry skin from itching or cracking. But **DON'T** moisturize between the toes—this could encourage a fungal infection.
- Cut nails carefully—and straight across.** Also, file the edges. Don't cut them too short, since this could lead to ingrown toe nails.
- Never trim corns or calluses.** No “bathroom surgery”—let your doctor do the job.
- Wear clean, dry socks.** Change them daily.
- Avoid the wrong type of socks.** Avoid tight elastic bands (they reduce circulation). Don't wear thick or bulky socks (they can fit poorly and irritate the skin).
- Wear socks to bed.** If your feet get cold at night, wear socks. **NEVER** use a heating pad or hot water bottle.

- Shake out your shoes and inspect the inside before wearing.** Remember, you may not feel a pebble—so always shake out your shoes before putting them on.
- Keep your feet warm and dry.** Don't get your feet wet in snow or rain. Wear warm socks and shoes in winter.
- Never walk barefoot.** Not even at home! You could step on something and get a scratch or cut.
- Take care of your diabetes.** Keep your blood sugar levels under control.
- Don't smoke.** Smoking restricts blood flow in your feet.
- Get periodic foot exams.** See your podiatric foot and ankle surgeon on a regular basis for an examination to help prevent the foot complications of diabetes. ▲

**American College of  
Foot and Ankle Surgeons**

This information has been prepared by the Consumer Education Committee of the American College of Foot and Ankle Surgeons, a professional society of 5,700 podiatric foot and ankle surgeons. Members of the College are Doctors of Podiatric Medicine who have received additional training through surgical residency programs.

The mission of the College is to promote superior care of foot and ankle surgical patients through education, research and the promotion of the highest professional standards.
