

## Our Mission

Haven Behavioral Hospital of Dayton partners with individuals, families and communities to improve the lives of patients through the delivery of high quality, specialty behavioral health services.

## About Haven

Haven Behavioral Hospital of Dayton is a licensed acute care psychiatric hospital providing a range of inpatient stabilization and treatment services to adults and older adults who are experiencing acute psychiatric disorders and co-occurring mental health and substance use issues.

Patients are treated through a program of comprehensive assessments, evidence-based treatment, medication evaluation and stabilization before returning home or transitioning to a lower level of care.

Services are provided by psychiatrists, specialty physicians, nurses, master level therapists, discharge planners and other professional staff dedicated to improving the quality of life of our patients.

We recognize the importance of family involvement to therapy. Our programs encourage visits from loved ones, and the social work team is available to provide education and assistance to support a patient's recovery in the community.

We are a behavioral health hospital committed to excellence for the treatment of our patients.

## The goal of inpatient care

The goal of inpatient care is to return our patients to their best possible level of health so they may continue to be treated safely as an outpatient.

People in an acute psychiatric crisis urgently require a safe environment, structured and supportive social surroundings and intensive psychiatric and physiological therapeutic intervention.

Haven combines these elements into unique and effective treatment programs where every aspect of care is intended to assist patients in achieving their optimal level of functioning.

### *The Heritage Program for Adults*

The Heritage Program is designed to provide crisis stabilization and intensive treatment for both voluntary and involuntary adult patients. Comprehensive assessment and treatment is provided by employing a multidisciplinary team approach to treating patients. Patient involvement and responsibility is encouraged through participation in treatment planning. Through this coordinated effort, the program provides the support, structure and therapeutic expertise needed to help patients stabilize their condition.

### *The Wisdom Program for Older Adults*

The Wisdom program is designed to treat older adults experiencing acute changes in mental status or behavior. Personalized treatment is provided in Haven's safe and nurturing environment to ensure that patients receive a customized recovery plan for the management and stabilization of their condition. Group, individual and activity therapies are an integral part of the treatment approach. Patients and families receive education on specific disorders, medications and effective coping strategies.

### *The Legacy Program for Co-occurring Disorders*

The Legacy Program is for those individuals suffering from both a substance use disorder and a psychiatric illness at the same time. At Haven, we recognize that in order for treatment to be effective, both conditions must be addressed simultaneously, and the Legacy Program's evidenced-based approach of medical intervention and therapy has proven to be very effective in treating co-occurring disorders. Detoxification, individual and group therapy sessions, medication management, activity therapies and other services may be part of a patient's customized treatment plan. Families and loved ones will be educated on effective support strategies that will aid in the patient's healing.
